DEAR PRINCESS TWILIGHT

It is of utmost urgency that you return to Canterlot at once. Our systems have been compromised and the harmony that binds Equestria is being drained as I speak.

It seems as though Queen Chrysalis, Cozy Glow, and Lord Tirek have joint forces to form a dangerous alliance called the Legion of Doom. Their ambition stretches further than the ambush of a single region, they seek total domination of all of Equestria. Their actions have already disrupted our networks, corrupted records, and fractured lines of communication between regions.

Twilight, I am entrusting you and your friends to trace and document any tracks of the Legion's influence on our system. Make sure to accurately record all of your actions and defend our systems from further corruption. Only then can we reconstruct Starswirl the Bearded's ancient banishment spell and send the Legion of Doom to Tartarus, once and for all.

You are being tested on more than just your skills alone. You will encounter deception and challenges meant to divide and confuse. Place your faith in one another. Should the Legion succeed, all known magic in Equestria will dissipate.

I would not entrust this task to anypony else. Time is not our ally, but harmony still is.

By order of the Crown,

Princess Celestia

RULES

General Conduct & Participation

1. Be kind and respectful to all participants. Remember: friendship is magic!
2. Do not lie, mislead, or deceive Grey Team or course staff.
3. Do not impersonate Grey Team members or course staff, including using their accounts or labeling artifacts with “greyteam” in their file name or other distinguishing characteristic.
4. Only officially registered Blue/Red Team members may contribute to team work. Outside assistance is not permitted except via established public resources (blogs, guides, Github repos, etc).

Infrastructure, Services & Attack Rules

5. Do not attack/access out-of-scope infrastructure. This includes hosts belonging to other teams that are not part of the scored infrastructure, or modifying system artifacts with “greyteam” in their name.
6. Do not migrate scored services to alternative hosts.
7. Do not configure firewall rules that block traffic from a large number of IPs in the same contiguous range (aka “subnet blocking”).
8. Do not physically tamper with any devices in the competition room.
9. Do not disable any valid user accounts listed in the competition packet. All admin users stated in the packet must retain admin privileges.
10. Teams may not disable SSH on Linux machines or RDP on Windows machines.
11. Red Team attacks must be reversible (no disk wiping, scored service uninstallation, full encryption, or irreversible system modifications. Deleting noncritical files in small quantities is okay.

RULES CONTINUED

12. All tools used by either team must be publicly accessible, and autonomous tooling must be approved by the Grey Team before use.
13. Use of public malware upload sites or third-party cloud antivirus services is prohibited (VirusTotal, Malwarebytes, Windows Defender).
14. Valid user password changes are limited to 3 per host per comp session.
15. Red Team tools or malware may run only if /greyteam_key (Linux) or C:\greyteam_key (Windows) exists on the target system. This file must not be modified (see Rule #5). If the file is missing on a system you believe is in scope, contact Grey Team before proceeding. If a tool cannot check for the file directly, verify its presence prior to deployment (e.g., through Ansible)
16. The Blue Team may request that up to 3 hosts per competition day be reverted to the Grey Team deploy state. Reverts will occur between competition days and the Grey Team will alert the Red Team that reverts have occurred. The Red Team may be provided exclusive access to the reverted host(s) for a short period of time to redeploy their initial malware set at the discretion of the Grey Team

Time & Access Restrictions

17. Do not access the competition environment outside of official competition hours unless explicitly authorized.
 - a. The Red Team will have access to the competition environment between the end of the prep day and the beginning of the first full competition day. They cannot modify the content of any scored services during this time.

RULES CONTINUED

Time & Access Restrictions

18. Red and Blue Team members are not permitted access to the Grey Team room (the Cyber Range conference room) by any means, including physical entry or remote sensing.

Language Policy

19. All participants must not be caught using human-specific language at any time. Human-specific words or expressions must be replaced with their pony appropriate terms, such as:

“Everybody” → “Everypony” “Someone” → “Somepony”
“Nobody” → “No pony” “Anyone” → “Anypony”

First offense: Warning

Second offense: Written apology

Third offense: Further disciplinary action (see enforcement below)

Enforcement

Rule breaks may result in special tasks (optional), point deductions, or removal from the competition (temporary hands-off period or full disqualification). The Grey Team reserves the right to modify any aspect of the competition at any time, with due notice to both teams.

TERMINOLOGY

- ★ The Legion of Doom - Red Team
- ★ Twilight and her friends - Blue Team
- ★ Princess Celestia/Grogar - Grey Team
- ★ Regions - Boxes/Scored Services
- ★ Friendship Lessons - Injects
- ★ Ponies - Users

SCORING OVERVIEW

Scoring

This is an adversarial service uptime competition. Each team receives points every minute corresponding to the number of services they own (the service is displaying legitimate or malicious content). In the event that both types of content are present, the Red Team wins the tie (see below). Offline services do not give any points to either team.

The scoring engine is accessible inside of the competition network by accessing the webpage at <https://scoring.mlp.local:443> and signing in with your team's credentials (example: `greyteam:defaultuserpassword`). Additionally, read-only scoreboards are available in the competition Discord or by netcating scoring.mlp.local:444 or 172.20.0.100:444.

The scoring engine provides an interface to update legitimate user passwords and (for Red Team) to submit new scoring criteria. Any submitted scoring criteria will be reviewed by Grey Team to ensure that it represents a significant transformative work compared to the service's legitimate content so that it provides value for Grogar's goals.

All user password changes for legitimate users made by both teams must be changed in the scoring portal before changing them on the host; the portal provides a counter of your team's remaining password changes for that host and how long until additional changes are available.

USERS

As the Blue Team, Princess Celestia has informed you that the default password for all legitimate users is: Friendship0!

The Red Team will have initial access into the environment using an additional malicious account not on this list, but may also compromise a limited number of legitimate users.

Local Users

- ★ twilight
- ★ pinkiepie
- ★ applejack
- ★ rarity
- ★ rainbowdash
- ★ fluttershy

Local Admin

- ★ starlight
- ★ trixie
- ★ derpy
- ★ snips
- ★ snails

Domain Admin

- ★ celestia
- ★ discord
- ★ luna
- ★ starswirl

INJECTS

Injects are short side quests delivered by Grey Team during the competition. Each inject has specific graded deliverables. Read the inject instructions carefully and only submit what it asks for.

SUBMISSION FORMAT

- ★ All injects are submitted as a PDF unless the inject explicitly asks for a different format.
- ★ Name your file as: friendship_lesson_[inject-number].pdf
- ★ Your response should be written like a friendship lesson letter.
- ★ Start your letter with: Dear Princess Celestia
- ★ Sign your letter as the persona you were working as for that inject, for example:

“Dear Princess Celestia,

[b o d y]

Your faithful student,
- Princess Twilight Sparkle”

- ★ All inject responses will be presented to Princess Celestia, so keep your response secret and readable

STAYING IN THEME

Whenever you write about groups of people, swap in pony wording where it makes sense. Examples include everypony, anypony, nopony, and everypony’s.

Note: Some injects are public facing and may ask you to address the ponies of Equestria instead of Princess Celestia. If the inject says that, adjust your formatting accordingly.

INJECT SCORING RUBRIC

Each inject is graded using three categories. Grey Team may adjust point values per inject, but this rubric is the default.

<u>Category</u>	<u>What we are looking for</u>	<u>Weight</u>
Professionalism	Correct file name, readable PDF, correct greeting, stays in theme, clear writing, proper signature	25%
Executive Summary	Summarizes all major topics addressed in the inject, presents the information without technical detail	25%
Completion of Task	You did the actual deliverables the inject asked for. Evidence is included to show exhaustive proof of actions claimed to be taken	50%

Two things can tank your score fast: missing required evidence and ignoring the formatting rules. If an inject asks for a screenshot, include it. If it asks for a short paragraph, write the paragraph.

All injects will be submitted to the [Google Form](#). Any late injects will be sent to the black hole and will never be seen again! If you need any clarification on inject instructions, please ask any Grey Team member.

COMPETITION ACCESS

The Blue Team has 10 jumpboxes with access into the competition environment. These devices are running Ubuntu 24.04 Desktop and can be accessed via the [CyberRange Sshwifty client](#) (CLI access) or via the [CyberRange RustDesk Relay Server](#) (GUI access). These hosts are out of scope for the Red Team. Their credentials are: Friendship0!

All competition infrastructure (including scoring) is only accessible via hosts directly connected to the competition network. The Blue Team is responsible for verifying connectivity to the scoring website and in-scope infrastructure before the first scoring period of the competition. All in-scope hosts are accessible via SSH (Linux) or RDP (Windows).

<u>Hostname</u>	<u>Internal IP</u>	<u>External IP</u>	<u>RustDesk ID</u>
